DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a reticle (claims 1-19), classified in class 430, subclass 5; and an exposure apparatus (claim 20), classified in class 355, subclass 18.
- II. Claim 21, drawn to a method for identifying a reticle, classified in class 382, subclass 144.

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the reticle and exposure apparatus as claimed in Group I can be used to practice another and materially different process than that claimed in Group II, such as double exposures of a resist on a substrate through a patterned reticle with intermediate alignment or registration of the reticle between the double exposures (classified in class 430, subclass 22).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and also because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

Applicants are also reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more

Art Unit: 1756

of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
